DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 21 is rejected under 35 U.S.C. 102(b) as being anticipated by Caldwell. Caldwell discloses a waveguide 11 having two dimensions on the order of a wavelength of emitted light and a third dimension sufficiently long to produce a surface area on the order of many square centimeters; and a phosphor film 13 disposed on the waveguide substrate and having a direction parallel to the third dimension, the phosphor film 13 having a guided mode such that excitation energy received by the phosphor film in a direction substantially sheer or perpendicular to the waveguide direction generates light in the phosphor film that travels in the phosphor film in the waveguide direction and exits through the exit region along the waveguide direction.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-14, 16-17 and 19-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over (Thorgerson et al or Mori) in view of Caldwell in view of Levinson et al. (Thorgerson et al or Mori) discloses the claimed invention except for the phosphor region. Levinson et al teaches that it is advantageous to use phosphor films or layers with waveguides to provide efficient illumination along the length of the waveguide. It would have been obvious to one skilled in the art at the time the invention was made to modify the waveguides of (Thorgerson et al or Mori) to include a phosphorescent layer or film as taught by Levinson et al in order to provide efficient illumination along the length of the waveguide as taught by Levinson et al.

Allowable Subject Matter

4. Claims 1-14, 16-17 and 19-20 are allowed.
5. Claim 22 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments with respect to claim 21 has been considered but are moot in view of the new ground(s) of rejection.
